# The Classroom Lab

Diagnose each observation by the pillar it most directly calls for.

Academic pillar

Personalistic pillar

Cognitive pillar

|                               |                                |                            |                              |                          |                             |                            |                                |
|-------------------------------|--------------------------------|----------------------------|------------------------------|--------------------------|-----------------------------|----------------------------|--------------------------------|
| Heritage is never introduced  | Choice is replaced by pressure | Wrong model needs conflict | Fun activity lacks knowledge | Works only under control | Tests narrow the curriculum | Old schema blocks new task | Book ban blocks critical voice |
| No trust after public shaming | Group climate feels unsafe     | Treats hypothesis as fact  | Needs concrete manipulation  |                          |                             |                            |                                |
